

HOTEL HARDWARE

EHH 001

Hotel Room RF Card Lock for door thickness 40~65mm, Base Material - Stainless Steel, Finish - SS Matt
Hotel Card Locks have many advantages over the normal mortise locks with the foremost advantage being freedom from keys. Also they can be time restricted and programmed to automatically stop working after the guests check out of the hotel.

EHH 002

RF Card Encoder & RF cards (for Reception)
Encoders are used to programme guest information into the RF cards such as duration of stay, room number, etc. Are used by the administrators at the hotel reception to issue cards to the guests.

Software System

Encoder

Intelligent Card

EHH 003

Hotel Lock & Card Management Software
It is a comprehensive hotel lock and card management software which has to be installed on the hotels reception computer system with the help of which the hotel administrator can issue and cancel cards and programme a variety of other features.

Energy Saving Switch

Electronic Door Lock

EHH 004

RF Card Recorder
Recorders are used to collect data from the room locks and read it on the computer in order to tally the opening records of the different hotel room doors. They are an audit trail for the hotel locks and can be used in cases of theft or other similar emergencies.

EHH 005

RF Card Activated Energy Saving Device
Energy Saving Switches help to automatically cut-off the power supply to the room once the card is taken out of the switch. This helps to save a lot on electricity bills for the hotel when the guest is not in the room.
* Exit Switches do not work with credit cards or visiting cards thereby preventing the guest from using unnecessary power while he is out of his room.

EHH 006

High Security Hotel Safe with Digital Keypad, with Code Override Key, Audit Trail Function, Multiple Code Settings, Predrilled holes for bottom and back mounting,

EHH 007

Signages - Male/Female
